APS Energy Efficiency Initiative

APS Business customer who upgrade or build their facilities with energy efficient equipment can apply to APS for incentives worth up to \$300,000.

The APS Business Solutions Program offers three areas of assistance:

Prescriptive incentives for business customer who make energy efficiency equipment upgrades and improvements to lighting, cooling, refrigeration and motors applications for retrofit and new construction projects.

Custom incentives for large business customers installing energy efficient measures that fall outside of the prescriptive list in major renovation and new construction projects.

Assistance with energy study incentives for large business customers. This includes energy feasibility studies, design assistance, commissioning studies and retro-commissioning studies. Customers are eligible to apply for study incentives that cover up to 50 percent of the qualify study cost or \$10,000 maximum per customer.

Minimum Requirements

To receive the incentives, customers must submit a pre-notification application, install the approved equipment or have the service performed, and submit the completed application. Small-business customers can receive up to \$150,000 of incentive per calendar year. Customers with aggregated loads greater than 200kW demand can receive up to \$300,000 per program year. The total incentive paid cannot exceed 50 percent of the incremental measure cost. Direct labor costs incurred by the APS customer will not be considered as measure cost.

For more information on this program, a customized rate analysis or information on APS's generation mix contact: David Bentler, Statewide Economic Development Manager at 602-250-3613 or David.Bentler@aps.com.
